

## Air Emissions Management Policy

Gravita India is dedicated to minimizing air emissions and promoting sustainable environmental practices. This Air Emissions management policy outlines our core commitments to manage air emissions effectively. This policy is applicable for all emissions except CO2 emissions which are included in Energy and Carbon Policy.

As a part of the policy, Gravita India will ensure:

- **Understanding Air Emissions:** Continuously identify and assess sources of air emissions across all operations to ensure a comprehensive understanding.
- **Prevention and Reduction:** Implement best practices and advanced technologies to prevent and reduce emissions, focusing on energy-efficient and cleaner production methods.
- **Emission Mitigation Efforts:** Proactively adopt measures like adopting cleaner fuels, filtration systems, and renewable energy to mitigate the impact of emissions.
- **Regulatory Compliance:** Ensure full compliance with applicable national environmental laws and supporting standards (like ISO 14001) and ensure regular review for any updated requirement.
- **Environmental Management Systems:** Maintain high-performance systems for monitoring, assessment, and improvement of emission practices.
- **Stakeholder Engagement:** Promote transparency by engaging key stakeholders while disclosing annual performance of the organization on the key parameters and efforts undertaken to improve performance.
- **Continuous improvement:** The responsibility of implementation of this policy is with Director-Operations at group level and plant head at plant level supported by plant admin and EHS officer.

### Review:

This Policy will be reviewed once every 2 years or after any material change in company's business process.
